Summary Section

Investment Objective

The investment objective of the Mairs & Power Minnesota Municipal Bond ETF (the “Fund”) is to seek current income that is exempt from federal and Minnesota state income tax consistent with the preservation of capital.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund (“Shares”). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and examples below.

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.39%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.00%
Total Annual Fund Operating Expenses⁽¹⁾	0.39%

⁽¹⁾ Estimated for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year	Three Years
\$40	\$125

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These transaction costs and potentially higher taxes, which are not reflected in Total Annual Fund Operating Expenses or in the example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets (including borrowings for investment purposes) in municipal debt securities that pay interest that is exempt from regular federal income tax and Minnesota state income tax (collectively, “Municipal Securities”). Generally, these Municipal Securities are issued by or on behalf of the State of Minnesota and its political subdivisions, agencies, authorities and instrumentalities, and by other qualified issuers located in Minnesota. The Fund may invest up to 20% of its net assets in debt securities that pay interest subject to taxation, including the federal alternative minimum tax (“AMT”).

The Fund can invest in all types of Municipal Securities, including municipal lease obligations (and certificates of participation in such obligations), insured municipal bonds, municipal general obligation bonds, municipal

revenue bonds, municipal notes, municipal cash equivalents, private activity bonds, and pre-refunded and escrowed to maturity bonds. In addition, Municipal Securities include securities issued by custodial receipt trusts, which are investment vehicles the underlying assets of which are municipal bonds. Municipal Securities also include instruments evidencing direct ownership of interest payments or principal payments, or both, on municipal securities, such as tender option bonds and participation interests in all or part of specific holdings of municipal obligations, provided that the applicable issuer receives assurances from legal counsel that the interest payable on the securities is exempt from federal income tax. The Fund may invest in Municipal Securities of any duration and any maturity and does not seek to maintain a particular dollar-weighted average maturity. The Fund may purchase and sell securities on a when-issued, delayed delivery or forward commitment basis. The Fund may invest in other investment companies, including exchange-traded funds (“ETFs”), to obtain exposure to certain Municipal Securities, or for liquidity or other reasons. The Fund may invest in zero coupon bonds, which are issued at substantial discounts from their value at maturity and pay no cash income to their holders until they mature. The Fund also may invest in Municipal Securities whose interest payments vary inversely with changes in short-term tax-exempt interest rate (“inverse floaters”). Inverse floaters are derivative securities that provide leveraged exposure to underlying municipal bonds. The Fund’s investment in inverse floaters are designed to increase the Fund’s income and return through this leveraged exposure. These investments are speculative, however, and also create the possibility that income and returns will be diminished. The Fund may invest in inverse floaters with any degree of leverage (measured by comparing the outstanding principal amount of related short-term floating rate securities to the par value of the underlying municipal bond). However, the Fund may only expose up to 10% of its total assets to the effects of leverage from its investments in inverse floaters. The Fund’s investments in inverse floaters are included and will be valued on a marked-to-market basis for purposes of the 80% policy described above.

Under normal market conditions, the Fund will invest at least 75% of its net assets in securities that are, at the time of investment, rated investment grade (*i.e.*, rated Baa3/BBB- or above) by at least one nationally recognized statistical rating organization (“NRSRO”), but may invest up to 25% of its net assets at the time of investment in non-investment-grade securities, which are not in default (*i.e.*, rated within B3/B- to Ba1/BB+, sometimes called “junk bonds”, as well as unrated securities. The Fund is not permitted to invest in securities that are rated below B3/B- or equivalent NRSRO ratings, or securities deemed either in default or near default by the Fund’s investment adviser, Mairs & Power, Inc. (the “Adviser”). The Fund will consider pre-refunded or escrowed-to maturity bonds using U.S. Treasury securities or U.S. government agency securities, regardless of rating, to be investment grade securities.

The Fund is classified as “non-diversified” under the Investment Company Act of 1940 (the “1940 Act”). Since the Fund is non-diversified, it may invest a greater percentage of its assets in a particular investment or issuer than a diversified fund.

The Fund does not seek to replicate any index and is actively managed. The Adviser employs primarily a buy and hold strategy seeking income rather than capital returns. The Adviser conducts fundamental analysis on the issue prior to purchasing debt securities. The Adviser may choose to sell securities for a variety of reasons, such as deteriorating credit or to secure gains, limit losses, extend or shorten duration, or redeploy assets into more promising opportunities.

Principal Risks of Investing in the Fund

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and/or ability to meet its investment objective. Losing all or a portion of your investment is a risk of investing in the Fund. The following additional risks could affect the value of your investment, and are ordered alphabetically rather than by importance. You should understand these risks before investing. For more information about the risks of

investing in the Fund, see the section in the Fund’s Prospectus titled “Fund Details — Principal Risks.” The principal risks of investing in the Fund are:

- *Active Management Risk.* Active management by the Adviser in selecting and maintaining a portfolio of securities that will achieve the Fund’s investment objective could cause the Fund to underperform compared to other funds having similar investment objectives.
- *AMT Risk.* Certain bonds owned by the Fund may generate income that is subject to the federal AMT. The interest on these “private activity” bonds could become subject to the federal AMT if you are a taxpayer that meets the AMT criteria. If you are subject to the federal AMT, you will be required to add any income attributable to these bonds (as reported by the Fund annually) to other so-called “tax preference items” to determine possible liability for the federal AMT.
- *Below Investment Grade Bonds Risk.* The Fund’s investments in below investment grade bonds are subject to a greater risk of loss of income and principal than higher grade debt securities. The Fund’s investments in below investment grade bonds also subject the Fund to greater levels of interest rate, credit and liquidity risk than funds that do not invest in such securities. Issuers of below investment grade bonds are often highly leveraged and are more vulnerable to changes in the economy. These securities are considered predominately speculative with respect to the issuer’s continuing ability to make principal and interest payments. These below investment grade securities are also known as “high yield” or “junk” bonds.
- *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by the Fund may “call” or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund’s income.
- *Capital Gains Tax-Related Risk.* While dividend income is expected to be tax-free, Fund shareholders can recognize taxable income in two ways: (1) if you sell your Shares at a price that is higher than when you bought them, you will have a taxable capital gain; on the other hand, if you sell your Shares at a price that is lower than the price when you bought them, you will have a capital loss; and (2) in the event the Fund sells more securities at prices higher than when they were bought by the Fund, the Fund may pass through the profit it makes from these transactions by making a taxable capital gain distribution.
- *Credit Risk.* Debt issuers and other counterparties may not honor their obligations or may have their debt downgraded by ratings agencies. Credit risk is the risk that an issuer or other obligated party of a municipal bond may default or fail to pay interest and principal payments when due, and the related risk that the value of a municipal bond may decline because of concerns about the issuer’s ability or willingness to make such payments. The Fund’s investments in inverse floaters will increase the Fund’s credit risk.
- *Cybersecurity Risk.* With the increased use of technologies such as the Internet to conduct business, the Fund is susceptible to operational, information security, and related risks. Cyber incidents affecting the Fund or its service providers may cause disruptions and impact business operations, potentially resulting in financial losses, interference with the Fund’s ability to calculate its NAV, impediments to trading, the inability of shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs.
- *ETF Risk.* The Fund is an ETF and, as a result of an ETF’s structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may

be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

- *Cash Redemption Risk.* The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to realize a capital gain that it might not have realized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. To the extent that the transaction fees charged for redemptions of creation units is insufficient to cover the Fund's transaction costs of selling portfolio securities, the Fund's performance could be negatively impacted.
- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. As a result, investors in the Fund may pay significantly more or receive significantly less for Shares than the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
- *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. This could lead to the Fund's shares trading at a price that is higher or lower than the Fund's NAV.
- *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund's income and potentially in the value of the Fund's investments.
- *Interest Rate Risk.* An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.
- *Inverse Floating Rate Obligations Risk.* The price of inverse floating rate obligations ("inverse floaters") is expected to decline when interest rates rise, and generally will decline further than the price of a bond with a similar maturity. The price of inverse floaters is typically more volatile than the price of bonds with similar maturities. These risks can be particularly high if leverage is used in the formula that determines the interest

payable by the inverse floater, which may make the Fund's returns more volatile and increase the risk of loss. Additionally, these securities may lose some or all of their principal and, in some cases, the Fund could lose money in excess of its investment.

- *Large Shareholder Risk.* Certain account holders may from time to time own or control a significant percentage of Shares. The Fund is subject to the risk that a redemption by large shareholders of all or a portion of their Shares or a purchase of Shares in large amounts and/or on a frequent basis will adversely affect the Fund's performance if it is forced to sell portfolio securities or invest cash when the Adviser would not otherwise choose to do so.
- *Liquidity Risk.* Certain debt obligations may be difficult or impossible to sell at the time and price that the Adviser would like to sell. The Adviser may have to lower the price, sell other debt obligations or forego an investment opportunity, any of which may have a negative effect on the management or performance of the Fund.
- *Market Risk.* The trading prices of equity securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.
- *Minnesota Municipal Securities Risk.* Because the Fund invests substantially in Minnesota municipal instruments, it is more exposed to the impact of negative political, economic and legislative factors within Minnesota than a fund that invests more widely.
- *Minnesota State Specific Risk.* The Fund substantially invests in municipal securities issued by the state of Minnesota and its political subdivisions. The state relies heavily on a progressive individual income tax and a retail sales tax for revenue, which results in a fiscal system that is sensitive to economic conditions.
- *Municipal Bond Market Risk.* The Fund may be adversely affected due to factors such as the limited amount of public information available regarding the municipal bonds held by the Fund as compared to that for corporate equities or bonds, legislative changes and local and business developments, general conditions of the municipal bond market, the size of the particular offering, the rating of the issue, and the maturity of the obligation.
- *Municipal Securities Risk.* Municipal securities can be significantly affected by political or economic changes, including changes made in the law after issuance of the securities, as well as uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders, including in connection with an issuer insolvency. Municipal securities backed by current or anticipated revenues from a specific project or specific assets can be negatively affected by the inability to collect revenues from the project or the assets.
- *New Fund Risk.* The Fund is a recently organized, management investment company with no operating history. As a result, prospective investors have a limited track record on which to base their investment decision. There is also a risk that the Fund will not grow to or maintain an economically viable size, in which case it could ultimately liquidate without shareholder approval. The timing of such liquidation may not be favorable and could have negative tax consequences for shareholders. From time to time, an Authorized Participant, a third-party investor, the Investment Adviser or an affiliate of the Investment Adviser, may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or for the Fund to achieve size or scale. There can be no assurance that any such

entity would not redeem its investment or that the size of the Fund would be maintained at such levels, which could negatively impact the Fund. The Fund's distributor does not maintain a secondary market in the shares.

- *Non-Diversification Risk.* Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, a decline in the value of an investment in a single issuer could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.
- *Other Investment Companies Risk.* You will indirectly bear fees and expenses charged by the underlying funds in addition to the Fund's direct fees and expenses. As a result, your cost of investing in the Fund will generally be higher than the cost of investing directly in the underlying fund shares.
- *Rating Agencies Risks.* Ratings are not an absolute standard of quality. Ratings are general indicators that reflect only the view of the originating rating agencies from which an explanation of the significance of such ratings may be obtained. There is no assurance that a particular rating will continue for any given period of time or that any such rating will not be revised downward or withdrawn entirely. Such changes may negatively affect the liquidity or market price of the securities in which the Fund invests.
- *Recent Market Events Risk.* U.S. and international markets have experienced significant periods of volatility in recent months and years due to a number of economic, political and global macro factors including the impact of the coronavirus (COVID-19) as a global pandemic, which has resulted in public health issues, business interruptions, growth concerns in the U.S. and overseas, layoffs, rising unemployment claims, changed travel and social behaviors and reduced consumer spending. The effects of COVID-19 may lead to a substantial economic downturn or recession in the U.S. and global economies, the recovery from which is uncertain and may last for an extended period of time.
- *Tax Risk.* Municipal obligations may decrease in value during times when federal income tax rates are falling. The Fund's investments are affected by changes in federal income tax rates applicable to, or the continuing federal tax-exempt status of, interest income on municipal obligations. Any proposed or actual changes in such rates or exempt status, therefore, can significantly affect the liquidity, marketability and supply and demand for municipal obligations, which would in turn affect the Fund's ability to acquire and dispose of municipal obligations at desirable yield and price levels.
- *Unrated Securities Risks.* Unrated securities may be less liquid than comparable rated securities and involve the risk that the Adviser may not accurately evaluate the security's comparative credit rating.
- *Valuation Risk.* The prices provided by the Fund's pricing services or independent dealers or the fair value determinations made by the Fund's valuation committee may be different from the prices used by other investment companies or from the prices at which debt obligations are actually bought and sold. The prices of certain debt obligations provided by pricing services may be subject to frequent and significant change, and will vary depending on the information that is available.
- *Zero Coupon Bond Risk.* Zero coupon bonds do not pay interest on a current basis and may be highly volatile as interest rates rise or fall. Although zero coupon bonds generate income for accounting purposes, they do not produce cash flow, and thus the Fund could be forced to liquidate securities at an inopportune time in order to generate cash to distribute to shareholders as required by tax laws.

Performance

Performance information for the Fund is not included because the Fund does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information will be available on the Fund’s website at www.mairsandpower.com.

Management

The Adviser

The Fund employs Mairs & Power, Inc. to manage the Fund’s investment portfolio. The Fund’s portfolio managers are as follows:

Name/Primary Title with the Fund	Primary Title with the Adviser	Tenure with the Fund	Tenure with the Adviser*
Brent S. Miller, Lead Portfolio Manager	Fixed Income Assistant Portfolio Manager	Lead Portfolio Manager since 2021	Since 2019
Robert W. Thompson, Co-Manager	Director of Fixed Income	Co-Manager since 2021	Since 2016

* Tenure with the Adviser is the year each individual started employment with the Adviser and may not align with primary title with the Adviser.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be purchased and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and asked prices is often referred to as the “bid-ask spread”. Because the Fund has not commenced operations, the Fund does not have a sufficient trading history to report trading information and related costs.

Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads, when available, can also be found on the Fund’s website at www.mairsandpower.com.

Tax Information

The Fund intends to make distributions that are exempt from federal and Minnesota state income tax, in the form of exempt-interest dividends. However, some of the Fund’s distributions other than exempt-interest dividends may be taxed as ordinary income or capital gains (or a combination). All or a portion of these distributions, however, may be subject to the federal alternative minimum tax and state and local taxes. The Fund also may make distributions that are taxable to you as ordinary income or capital gains.

The Fund intends to comply with certain state tax requirements so that dividends it pays that are attributable to interest on Minnesota municipal securities will be excluded from the Minnesota taxable net income of individuals, estates and trusts. To meet these requirements, at least 95% of the exempt-interest dividends paid by the Fund

must be derived from interest income on Minnesota municipal securities. A portion of the Fund's dividends may be subject to the Minnesota alternative minimum tax. Exempt-interest dividends are not excluded from taxable income for purposes of the Minnesota franchise tax imposed on corporations and financial institutions.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (a "Financial Intermediary"), the Adviser or its affiliates may pay Financial Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Financial Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Financial Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Financial Intermediary's website for more information.

Fund Details

Investment Objective

The Fund seeks current income that is exempt from federal and Minnesota state income tax consistent with the preservation of capital. The Fund's investment objective is non-fundamental and may be changed without shareholder approval.

Principal Investment Strategies

The Fund has adopted a policy to invest, under normal circumstances, at least 80% of its net assets (including borrowings for investment purposes) in Minnesota municipal debt securities that pay interest that is exempt from regular federal income tax and Minnesota state income tax. Pursuant to Rule 35d-1 under the 1940 Act, such policy has been adopted as a fundamental investment policy and may not be changed without shareholder approval.

The Fund does not seek to replicate any index and is actively managed. The Adviser employs primarily a buy and hold strategy seeking income rather than capital returns. The Adviser conducts fundamental analysis on the issue prior to purchasing debt securities. The Adviser looks for stable credit trends and monitors credit quality over the life of the security. The Adviser may choose to sell securities for a variety of reasons, such as deteriorating credit or to secure gains, limit losses, extend or shorten duration, or redeploy assets into more promising opportunities. Although the Adviser will search for investments across a large number of Municipal Securities that finance different types of projects, from time to time, based on economic conditions, the Fund may have significant positions in Municipal Securities that finance similar types of projects.

The principal risks of investing in the Fund are described in the "Fund Summary" above, and in "Principal Risks," below. This section provides additional information about some of the investments and related risks described under the "Fund Summary" above. It also describes additional risks faced by the Fund and investment techniques that may be used by the Fund from time to time. Many of the investment techniques described in this section are discretionary, which means that the Adviser can decide whether to use them or not. This Prospectus does not attempt to disclose all of the various types of instruments and investment techniques that may be used by the Fund. As with any fund, investors in the Fund rely on the professional investment judgment and skill of the Adviser and the individual portfolio managers. Please see the Statement of Additional Information ("SAI") for more information about the instruments and investment techniques described in this section and about other instruments and techniques that may be used by the Fund.

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets (including borrowings for investment purposes) in municipal debt securities that pay interest that is exempt from regular federal income tax and Minnesota state income tax (collectively, "Municipal Securities"). Generally, these Municipal Securities are issued by or on behalf of the State of Minnesota and its political subdivisions, agencies, authorities and instrumentalities, and by other qualified issuers located in Minnesota. The Fund may invest up to 20% of its net assets in debt securities that pay interest subject to taxation, including the federal alternative minimum tax ("AMT").

The Fund can invest in all types of Municipal Securities, including but not limited to municipal lease obligations (and certificates of participation in such obligations), insured municipal bonds, municipal general obligation bonds, municipal revenue bonds, municipal notes, municipal cash equivalents, private activity bonds, pre-refunded and escrowed to maturity bonds, securities issued by custodial receipt trusts, which are investment vehicles the underlying assets of which are municipal bonds, and instruments evidencing direct ownership of interest payments or principal payments, or both, on municipal securities, such as tender option bonds and

participation interests in all or part of specific holdings of municipal obligations, provided that the applicable issuer receives assurances from legal counsel that the interest payable on the securities is exempt from federal income tax.

Municipal Securities. Municipal securities generally are understood to include debt obligations of state and local governments, agencies and authorities. Municipal securities, which may be issued in various forms, including bonds and notes, are issued to obtain funds for various public purposes. Municipal bonds are debt obligations issued by states, municipalities and other political subdivisions, agencies, authorities and instrumentalities of states and multi-state agencies or authorities (collectively, “municipalities”).

Municipal bonds include securities from a variety of sectors, each of which has unique risks. They include, but are not limited to, general obligation bonds, limited obligation bonds, and revenue bonds (including industrial development bonds issued pursuant to federal tax law). General obligation bonds are obligations involving the credit of an issuer possessing taxing power and are payable from such issuer’s general revenues and not from any particular source. Limited obligation bonds are payable only from the revenues derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise or other specific revenue source. Revenue bonds are issued for either project or enterprise financings in which the bond issuer pledges to the bondholders the revenues generated by the operating projects financed from the proceeds of the bond issuance. Revenue bonds involve the credit risk of the underlying project or enterprise (or its corporate user) rather than the credit risk of the issuing municipality. Under the Internal Revenue Code of 1986, as amended (the “Code”), certain limited obligation bonds are considered “private activity bonds” and interest paid on such bonds is treated as an item of tax preference for purposes of calculating federal alternative minimum tax liability. Tax-exempt private activity bonds and industrial development bonds generally are also classified as revenue bonds and thus are not payable from the issuer’s general revenues. The credit and quality of private activity bonds and industrial development bonds are usually related to the credit of the corporate user of the facilities. Payment of interest on and repayment of principal of such bonds are the responsibility of the corporate user (and/or any guarantor).

Some municipal bonds feature credit enhancements, such as lines of credit, letters of credit, municipal bond insurance, and standby bond purchase agreements (“SBPAs”). SBPAs include lines of credit that are issued by a third party, usually a bank, to enhance liquidity and ensure repayment of principal and any accrued interest if the underlying municipal bond should default. Municipal bond insurance, which is usually purchased by the bond issuer from a private, non-governmental insurance company, provides an unconditional and irrevocable assurance that the insured bond’s principal and interest will be paid when due. Insurance does not guarantee the price of the bond or the share price of the Fund.

Municipal bonds also include tender option bonds, which are municipal derivatives created by dividing the income stream provided by an underlying municipal bond to create two securities issued by a special-purpose trust, one short-term and one long-term. The interest rate on the short-term component is periodically reset. The short-term component has negligible interest rate risk, while the long-term component has all of the interest rate risk of the original bond. After income is paid on the short-term securities at current rates, the residual income goes to the long-term securities.

Therefore, rising short-term interest rates result in lower income for the longer-term portion, and vice versa. The longer-term components can be very volatile and may be less liquid than other municipal bonds of comparable maturity. These securities have been developed in the secondary market to meet the demand for short-term, tax-exempt securities.

Prices and yields on municipal bonds are dependent on a variety of factors, including general money-market conditions, the financial condition of the issuer, general conditions of the municipal bond market, the size of a

particular offering, the maturity of the obligation and the rating of the issue. A number of these factors, including the ratings of particular issues, are subject to change from time to time. Information about the financial condition of an issuer of municipal bonds may not be as extensive as that which is made available by corporations whose securities are publicly traded. Tax Anticipation Notes are used to finance working capital needs of municipalities and are issued in anticipation of various seasonal tax revenues, to be payable from these specific future taxes. They are usually general obligations of the issuer, secured by the taxing power for the payment of principal and interest. Municipal securities also include various forms of notes. These notes include, but are not limited to, the following types:

- Revenue anticipation notes which are issued in expectation of receipt of other kinds of revenue, such as federal revenues. They, also, are usually general obligations of the issuer.
- Bond anticipation notes which are normally issued to provide interim financial assistance until long-term financing can be arranged. The long-term bonds then provide funds for the repayment of the notes.
- Construction loan notes which are sold to provide construction financing for specific projects. After successful completion and acceptance, many projects receive permanent financing through the Federal Housing Administration (“FHA”) under the Federal National Mortgage Association (“FNMA”) or the Government National Mortgage Association (“GNMA”).
- Project notes which are instruments sold by the U.S. Department of Housing and Urban Development (“HUD”) but issued by a state or local housing agency to provide financing for a variety of programs. They are backed by the full faith and credit of the U.S. government, and generally carry a term of one year or less.
- Short-term discount notes (tax-exempt commercial paper), which are short-term (365 days or less) promissory notes issued by municipalities to supplement their cash flow.

An entire issue of municipal securities may be purchased by one or a small number of institutional investors such as the Fund. Thus, the issue may not be said to be publicly offered. Unlike securities that must be registered under the 1933 Act prior to offer and sale, unless an exemption from such registration is available, municipal securities that are not publicly offered may nevertheless be readily marketable. A secondary market may exist for municipal securities that were not publicly offered initially.

There are, in addition, a variety of hybrid and special types of municipal obligations, such as municipal lease obligations, as well as numerous differences in the security of municipal securities both within and between the two principal classifications described above. Municipal lease obligations are municipal securities that may be supported by a lease or an installment purchase contract issued by state and local government authorities to acquire funds to obtain the use of a wide variety of equipment and facilities, such as fire and sanitation vehicles, computer equipment and other capital assets. These obligations, which may be secured or unsecured, are not general obligations and have evolved to make it possible for state and local governments to obtain the use of property and equipment without meeting constitutional and statutory requirements for the issuance of debt. Thus, municipal lease obligations have special risks not normally associated with municipal securities. These obligations frequently contain “non-appropriation” clauses that provide that the governmental issuer of the obligation has no obligation to make future payments under the lease or contract unless money is appropriated for such purposes by the legislative body on a yearly or other periodic basis. In addition to the “non-appropriation” risk, many municipal lease obligations have not yet developed the depth of marketability associated with municipal bonds; moreover, although the obligations may be secured by the leased equipment, the disposition of the equipment in the event of foreclosure might prove difficult. For the purpose of the Fund’s investment restrictions, the

identification of the “issuer” of municipal securities that are not general obligation bonds is made by the Adviser on the basis of the characteristics of the municipal securities as described above, the most significant of which is the source of funds for the payment of principal and interest on such securities.

The liquidity of municipal lease obligations purchased by the Fund will be determined pursuant to guidelines approved by the Board. Factors considered in making such determinations may include: the frequency of trades and quotes for the obligation; the number of dealers willing to purchase or sell the security and the number of other potential buyers; the willingness of dealers to undertake to make a market in the security; the nature of marketplace trades; the obligation’s rating; and, if the security is unrated, the factors generally considered by a rating agency. If municipal lease obligations are determined to be illiquid, then the Fund will limit its investment in these securities subject to its limitation on investments in illiquid securities.

Borrowing. The Fund may borrow money to the extent permitted under the 1940 Act, or otherwise limited herein, as such may be interpreted or modified by regulatory authorities having jurisdiction, from time to time. This borrowing may be unsecured. The 1940 Act precludes the Fund from borrowing if, as a result of such borrowing, the total amount of all money borrowed by the Fund exceeds 33 1/3% of the value of its total assets (that is, total assets including borrowings, less liabilities exclusive of borrowings) at the time of such borrowings. This means that the 1940 Act requires the Fund to maintain continuous asset coverage of 300% of the amount borrowed. If the 300% asset coverage should decline as a result of market fluctuations or other reasons, the Fund may be required to sell some of its portfolio holdings within three days to reduce the debt and restore the 300% asset coverage, even though it may be disadvantageous from an investment standpoint to sell securities at that time, and could cause the Fund to be unable to meet certain requirements for qualification as a regulated investment company under the Code.

Diversification. The Fund is non-diversified. A fund is considered “non-diversified” when a relatively high percentage of its assets may be invested in the securities of a limited number of issuers. Under applicable federal laws, the diversification of a fund’s holdings is measured at the time the fund purchases a security. However, if the Fund purchases a security and holds it for a period of time, the security may become a larger percentage of the Fund’s total assets due to movements in the financial markets. If the market affects several securities held by the Fund, the Fund may have a greater percentage of its assets invested in securities of fewer issuers. Because the Fund is non-diversified, the Fund is subject to the risk that its performance may be hurt disproportionately by the poor performance of relatively few securities.

Illiquid Securities. The Fund may invest in illiquid securities if such purchases at the time thereof would not cause more than 15% of the value of the Fund’s net assets to be invested in such illiquid or not readily marketable assets.

Investment Companies. The Fund may invest in securities of other investment companies, including closed-end investment companies, ETFs and business development companies, subject to limitations prescribed by the 1940 Act and any applicable investment restrictions described in the Fund’s Prospectus and SAI. Among other things, the 1940 Act limitations prohibit the Fund from: (1) acquiring more than 3% of the voting shares of an investment company; (2) investing more than 5% of the Fund’s total assets in securities of any one investment company; and (3) investing more than 10% of the Fund’s total assets in securities of all investment companies. These restrictions may not apply to certain investments in money market funds. The Fund may invest in other investment companies, including those managed by the Adviser, to the extent permitted by any rule under the 1940 Act or any interpretation thereunder or order granted by the SEC. The Fund indirectly will bear its proportionate share of any management fees and other expenses paid by the investment companies in which the Fund invests in addition to the fees and expenses the Fund bears directly in connection with its own operations. These securities represent interests in professionally managed portfolios that may invest in various types of

instruments pursuant to a wide range of investment styles. Investing in other investment companies involves substantially the same risks as investing directly in the underlying instruments, but may involve duplicative management and advisory fees and operating expenses. Certain types of investment companies, such as closed-end investment companies, issue a fixed number of shares that trade on a stock exchange or OTC at a premium or a discount to their NAV per share. Others are continuously offered at NAV per share but may also be traded in the secondary market.

Lending of Portfolio Securities. The Fund may lend portfolio securities to certain broker/dealers and institutions to the extent permitted by the 1940 Act, as modified or interpreted by regulatory authorities having jurisdiction, from time to time, in accordance with procedures adopted by the Board. By lending its securities, the Fund attempts to increase its net investment income through the receipt of interest on the loan. Any gain or loss in the market price of the securities loaned that might occur during the term of the loan would belong to the Fund. Such loans must be secured by collateral in cash or U.S. government securities maintained on a current basis in an amount at least equal to 100% of the current market value of the securities loaned. The Fund may call a loan and obtain the securities loaned at any time generally on less than five days' notice. For the duration of a loan, the Fund would continue to receive the equivalent of the interest or dividends paid by the issuer on the securities loaned and would also receive compensation from the investment of the collateral. The Fund would not, however, have the right to vote any securities having voting rights during the existence of the loan, but the Fund would call the loan in anticipation of an important vote to be taken among holders of the securities or of the giving or withholding of their consent on a material matter affecting the investment.

When-Issued Securities. The Fund may from time to time purchase securities on a "when-issued" basis. When purchasing a security on a when-issued basis, the Fund assumes the rights and risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its NAV. Debt securities, including municipal securities, are often issued in this manner. The price of such securities, which may be expressed in yield terms, is fixed at the time a commitment to purchase is made, but delivery of and payment for the when-issued securities take place at a later date. Normally, the settlement date occurs within one month of the purchase (60 days for municipal bonds and notes). During the period between purchase and settlement, no payment is made by the Fund, and no interest accrues to the Fund. To the extent that assets of the Fund are held in cash pending the settlement of a purchase of securities, the Fund would earn no income; however, it is the Fund's intention that the Fund will be fully invested to the extent practicable and subject to the policies stated herein and the Statement of Additional Information. Although when-issued securities may be sold prior to the settlement date, the Fund intends to purchase such securities with the purpose of actually acquiring them unless a sale appears desirable for investment reasons.

Temporary Strategies. The Fund may take temporary defensive measures that are inconsistent with the Fund's normal fundamental or non-fundamental investment limitations and strategies in response to adverse market, economic, political, or other conditions as determined by the Adviser. Such measures could include, but are not limited to, investments in (1) highly liquid short-term fixed income securities issued by or on behalf of municipal or corporate issuers, obligations of the U.S. Government and its agencies, commercial paper and bank certificates of deposit; (2) shares of other investment companies which have investment objectives consistent with those of the Fund; (3) repurchase agreements involving any such securities; and (4) money market funds or other money market instruments. There is no limit on the extent to which the Fund may take temporary defensive measures. In taking such measures, the Fund may fail to achieve its investment objective.

Principal Risks

All investments have risks. The Fund is designed for long-term investors. You should be prepared to accept fluctuations in portfolio value as the Fund seeks to achieve its investment objective. The Fund cannot provide assurance that it will achieve its objective. Loss of money is a risk of investing in the Fund. The following

information is in addition to, and should be read along with, the description of the Fund's principal investment risks in the section titled "Summary Section— Principal Risks of Investing in the Fund" above. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Losing all or a portion of your investment is a risk of investing in the Fund. The following additional risks could affect the value of your investment, and are ordered alphabetically rather than by importance. You should understand these risks before investing. The principal risks of investing in the Fund are:

Active Management Risk. Active management by the Adviser in selecting and maintaining a portfolio of securities that will achieve the Fund's investment objective could cause the Fund to underperform compared to other funds having similar investment objectives.

AMT Risk. Certain bonds owned by the Fund may generate income that is subject to the federal AMT. The interest on these "private activity" bonds could become subject to the federal AMT if you are a taxpayer that meets the federal AMT criteria. If you are subject to the federal AMT, you will be required to add any income attributable to these bonds (as reported by the Fund annually) to other so-called "tax preference items" to determine possible liability for the federal AMT.

Below Investment Grade Bonds Risk. The Fund's investments in below investment grade bonds (which are also known as "high yield" or "junk" bonds) are subject to a greater risk of loss of income and principal than higher grade debt securities. The Fund's investments in below investment grade bonds also subject the Fund to greater levels of interest rate, credit and liquidity risk than funds that do not invest in such securities. Issuers of below investment grade bonds are often highly leveraged and are more vulnerable to changes in the economy. These securities are considered predominately speculative with respect to the issuer's continuing ability to make principal and interest payments.

Call Risk. During periods of falling interest rates, an issuer of a callable bond held by the Fund may "call" or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund's income.

Capital Gains Tax-Related Risk. While dividend income is expected to be tax-free, Fund shareholders can recognize taxable income in two ways: (1) if you sell your Shares at a price that is higher than when you bought them, you will have a taxable capital gain; on the other hand, if you sell your Shares at a price that is lower than the price when you bought them, you will have a capital loss; and (2) in the event the Fund sells more securities at prices higher than when they were bought by the Fund, the Fund may pass through the profit it makes from these transactions by making a taxable capital gain distribution.

Credit Risk. Debt issuers and other counterparties may not honor their obligations or may have their debt downgraded by ratings agencies. Credit risk is the risk that an issuer or other obligated party of a municipal bond may be unable or unwilling to make interest and principal payments when due and the related risk that the value of a municipal bond may decline because of concerns about the issuer's ability or willingness to make such payments. The Fund's investments in inverse floaters will increase the Fund's credit risk.

Cybersecurity Risk. With the increasing use of the Internet and technology in connection with the Fund's operations, the Fund is susceptible to greater operational and information security risks through breaches in cyber security. Cyber security breaches include, without limitation, infection by computer viruses and unauthorized access to the Fund's systems through "hacking" or other means for the purpose of misappropriating assets or sensitive information, corrupting data, or causing operations to be disrupted. Cyber security breaches may also occur in a manner that does not require gaining unauthorized access, such as denial-of-service attacks or situations where authorized individuals intentionally or unintentionally release confidential information stored on the Fund's

systems. A cyber security breach may cause disruptions and impact the Fund's business operations, which could potentially result in financial losses, inability to determine the Fund's NAV, violation of applicable law, regulatory penalties and/or fines, compliance and other costs. The Fund and its shareholders could be negatively impacted as a result. In addition, because the Fund works closely with third-party service providers, indirect cyber security breaches at such third-party service providers may subject Fund shareholders to the same risks associated with direct cyber security breaches. Further, indirect cyber security breaches at an issuer of securities in which the Fund invests may similarly negatively impact Fund shareholders because of a decrease in the value of these securities. While the Fund has established risk management systems designed to reduce the risks associated with cyber security breaches, there can be no assurances that such measures will be successful particularly since the Fund does not control the cyber security systems of issuers or third-party service providers.

ETF Risk. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Cash Redemption Risk.* The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to realize a capital gain that it might not have realized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. To the extent that the transaction fees charged for redemptions of creation units is insufficient to cover the Fund's transaction costs of selling portfolio securities, the Fund's performance could be negatively impacted.
- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. As a result, investors in the Fund may pay significantly more or receive significantly less for Shares than the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
- *Trading.* Although Shares are listed for trading on the Cboe BZX Exchange, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. This could lead to the Fund's shares trading at a price that is higher or lower than the Fund's NAV.

Extension Risk. During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund's income and potentially in the value of the Fund's investments.

Interest Rate Risk. An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.

Inverse Floating Rate Obligations Risk. Inverse floating rate obligations ("inverse floaters") represent interests in bonds with interest rates that vary inversely to changes in short-term rates. As short-term rates rise, inverse floaters produce less income, and as short-term rates decline, inverse floaters produce more income. As a result, the price of inverse floaters is expected to decline when interest rates rise, and generally will decline further than the price of a bond with a similar maturity. The price of inverse floaters is typically more volatile than the price of bonds with similar maturities. Interest rate risk and price volatility of inverse floaters can be particularly high if leverage is used in the formula that determines the interest payable by the inverse floater. Leverage may make the Fund's returns more volatile and increase the risk of loss. The Fund generally invests in inverse floaters that include embedded leverage, thus exposing the Fund to greater risks and increased costs. The market value of a "leveraged" inverse floater will fluctuate in response to changes in market rates of interest to a greater extent than the value of an unleveraged investment, and the value of, and income earned on, an inverse floater that has a higher degree of leverage are more likely to be eliminated entirely under adverse market conditions. The use of short-term floating rate obligations may require the Fund to segregate or earmark cash or liquid assets to cover its obligations. Securities so segregated or earmarked will be unavailable for sale by the Fund (unless replaced by other securities qualifying for segregation requirements), which may limit the Fund's flexibility and may require that the Fund sell other portfolio investments at a time when it may be disadvantageous to sell such assets. Upon the occurrence of certain adverse events, the special purpose trust that created the inverse floater may be collapsed and the underlying security liquidated, and the Fund could lose the entire amount of its investment in the inverse floater and may, in some cases, be contractually required to pay the negative difference, if any, between the liquidation value of the underlying security and the principal amount of the short-term floating rate interests. On October 2020, the SEC adopted new regulations governing the use of derivatives by registered investment companies ("Rule 18f-4"). The Fund will be required to implement and comply with Rule 18f-4 by the third quarter of 2022. Once implemented, Rule 18f-4 will impose limits on the amount of derivatives a fund can enter into, eliminate the asset segregation framework currently used by funds to comply with Section 18 of the 1940 Act, treat derivatives as senior securities so that a failure to comply with the limits would result in a statutory violation and require funds whose use of derivatives is more than a limited specified exposure amount to establish and maintain a comprehensive derivatives risk management program and appoint a derivatives risk manager.

Large Shareholder Risk. Certain account holders may from time to time own or control a significant percentage of Shares. The Fund is subject to the risk that a redemption by large shareholders of all or a portion of their Shares or a purchase of Shares in large amounts and/or on a frequent basis will adversely affect the Fund's performance if it is forced to sell portfolio securities or invest cash when the Adviser would not otherwise choose to do so. This risk will be particularly pronounced if one shareholder owns a substantial portion of the Fund. Redemptions of a large number of Shares may affect the liquidity of the Fund's portfolio, increase the Fund's transaction costs and/or lead to the liquidation of the Fund. Such transactions also potentially limit the use of any capital loss carryforwards and certain other losses to offset future realized capital gains (if any).

Liquidity Risk. Certain debt obligations may be difficult or impossible to sell at the time and price that the Adviser would like to sell. The Adviser may have to lower the price, sell other debt obligations or forego an investment opportunity, any of which may have a negative effect on the management or performance of the Fund.

Market Risk. The trading prices of equity securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.

Minnesota Municipal Securities Risk. Because the Fund invests substantially in Minnesota municipal instruments, it is more exposed to the impact of negative political, economic and legislative factors within Minnesota than a fund that invests more widely.

Minnesota State Specific Risk. Because the Fund substantially invests in municipal securities issued by the state of Minnesota and its political subdivisions, the Fund's performance will be affected by economic and political conditions in the state of Minnesota and may be more volatile than the performance of a more geographically diversified fund. The state relies heavily on a progressive individual income tax and a retail sales tax for revenue, which results in a fiscal system that is sensitive to economic conditions. The ability of Minnesota or its municipalities to meet their obligations depends on the availability of tax and other revenues, the economic, political and demographic conditions within the state, and the underlying fiscal condition of the state, its counties and its municipalities. Minnesota and its municipalities are also facing rising levels of unfunded pension and similar liabilities, which are increasing pressure on their budgets and could adversely affect their ability to meet their outstanding obligations.

Municipal Bond Market Risk. The amount of public information available about the municipal bonds held by the Fund is generally less than that for corporate equities or bonds, and the investment performance of the Fund may therefore be more dependent on the analytical abilities of the Adviser than would be a stock fund or taxable bond fund. The secondary market for municipal bonds also tends to be less well-developed or liquid than many other securities markets, which may adversely affect the Fund's ability to sell its bonds at attractive prices.

The ability of municipal issuers to make timely payments of interest and principal may be diminished during general economic downturns and as governmental cost burdens are reallocated among federal, state and local governments. In addition, laws enacted in the future by Congress or state legislatures or referenda could extend the time for payment of principal and/or interest, or impose other constraints on enforcement of such obligations, or on the ability of municipal issuers to levy taxes. Issuers of municipal securities might seek protection under the bankruptcy laws. In the event of bankruptcy of such an issuer, the Fund could experience delays in collecting principal and interest and may not, in all circumstances, be able to collect all principal and interest to which it is entitled. To enforce its rights in the event of a default in the payment of interest or repayment of principal, or both, the Fund may take possession of, and manage, the assets securing the issuer's obligations on such securities, which may increase the Fund's operating expenses. Any income derived from the Fund's ownership or operation of such assets may not be tax-exempt.

Municipal Securities Risk. The Fund invests primarily in municipal securities. Municipal securities are fixed income securities issued by state or local governments or their agencies (such as housing or hospital authorities) to finance capital expenditures and operations. Municipal securities are subject to call/prepayment risk, credit/default risk, extension risk, interest risk and certain additional risks. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the debt securities of similar projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal securities (such as general obligation bonds, private activity bonds and moral obligation bonds). While interest earned on municipal securities is generally not subject to federal tax, any interest earned on taxable municipal securities is fully taxable at the federal level and may be subject to tax at the state level. Specific risks are associated with different types of municipal securities. Certain of the municipalities in which the Fund invests may experience significant financial difficulties, which may lead to

bankruptcy or default. The Fund will be more susceptible to factors which adversely affect issuers of municipal obligations than a fund which does not have as great of a concentration in municipal obligations. Also, there may be economic or political changes, including changes in law, after issuance of the securities, as well as uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders, including in connection with an issuer insolvency, that impact the ability of issuers of municipal securities to repay principal and to make interest payments on securities owned by the Fund. Any changes in the financial condition of municipal issuers also may adversely affect the value of the Fund's securities.

With respect to general obligation bonds, the full faith, credit and taxing power of the municipality that issues a general obligation bond secures payment of interest and repayment of principal. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. With respect to revenue bonds, payments of interest and principal are made only from the revenues generated by a particular facility, class of facilities or the proceeds of a special tax, or other revenue source, and depends on the money earned by that source. Private activity bonds are issued by municipalities and other public authorities to finance development of industrial facilities for use by a private enterprise. The private enterprise pays the principal and interest on the bond, and the issuer does not pledge its full faith, credit and taxing power for repayment. If the private enterprise defaults on its payments, the Fund may not receive any income or get its money back from the investment. Moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality. Municipal notes are shorter term municipal debt obligations. They may provide interim financing in anticipation of, and are secured by, tax collection, bond sales or revenue receipts. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money. In a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. The issuer will generally appropriate municipal funds for that purpose, but is not obligated to do so. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property. However, if the issuer does not fulfill its payment obligation it may be difficult to sell the property and the proceeds of a sale may not cover the Fund's loss.

New Fund Risk. There can be no assurance that the Fund will grow to or maintain an economically viable size, in which case the Board of Trustees may determine to liquidate the Fund. Liquidation of the Fund can be initiated without shareholder approval by the Board of Trustees if it determines that liquidation is in the best interest of shareholders. The timing of such liquidation may not be favorable and could have negative tax consequences for shareholders. From time to time, an Authorized Participant, a third-party investor, the Adviser or an affiliate of the Adviser, may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or for the Fund to achieve size or scale. There can be no assurance that any such entity would not redeem its investment or that the size of the Fund would be maintained at such levels, which could negatively impact the Fund. The Fund's distributor does not maintain a secondary market in the shares.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, a decline in the value of an investment in a single issuer could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Other Investment Companies Risk. Federal law generally prohibits a mutual fund (such as the Fund) from acquiring shares of an investment company if, immediately after such acquisition, the fund and its affiliated persons would hold more than 3% of such investment company's total outstanding shares. This prohibition may prevent the Fund from allocating its investments in an optimal manner. You will indirectly bear fees and expenses charged by

the underlying funds in addition to the Fund's direct fees and expenses and, as a result, your cost of investing in the Fund will generally be higher than the cost of investing directly in the underlying fund shares. In October 2020, the SEC adopted certain regulatory changes relating to a fund's ability to invest in another investment company. These changes include the adoption of Rule 12d1-4 under the 1940 Act and the rescission of certain related exemptive relief. The compliance date for the new Rule and rescission of the exemptive relief is January 2022. These changes may negatively impact the Fund's investment strategies and operations.

Rating Agencies Risks. Rating agencies may fail to make timely changes in credit ratings and an issuer's current financial condition may be better or worse than a rating indicates. In addition, rating agencies are subject to an inherent conflict of interest because they are often compensated by the same issuers whose securities they grade.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of economic, political and global macro factors including the impact of the novel coronavirus (COVID-19) as a global pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In particular, the spread of COVID-19 worldwide has resulted in disruptions to supply chains and customer activity, stress on the global healthcare system, temporary and permanent layoffs in the private sector and rising unemployment claims, reduced consumer spending, quarantines, cancellations, market declines, the closing of borders, restrictions on travel and widespread concern and uncertainty, all of which may lead to a substantial economic downturn or recession in the U.S. and global economies. The recovery from the effects of COVID-19 is uncertain and may last for an extended period of time. Health crises and related political, social and economic disruptions caused by the spread of COVID-19 may also exacerbate other pre-existing political, social and economic risks in certain countries. These developments as well as other events, such as the U.S. presidential election, could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, despite government efforts to address market disruptions. In addition, the Fund may face challenges with respect to its day-to-day operations if key personnel of the Adviser or other service providers are unavailable due to quarantines and restrictions on travel related to COVID-19. As a result, the risk environment remains elevated. The Adviser will monitor developments and seek to manage the Fund in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that it will be successful in doing so.

Tax Risk. Municipal obligations may decrease in value during times when federal income tax rates are falling. Since interest income on municipal obligations is normally not subject to regular federal income taxation, the attractiveness of municipal obligations in relation to other investment alternatives is affected by changes in federal income tax rates applicable to, or the continuing federal tax-exempt status of, such interest income. Any proposed or actual changes in such rates or exempt status, therefore, can significantly affect the liquidity, marketability and supply and demand for municipal obligations, which would in turn affect the Fund's ability to acquire and dispose of municipal obligations at desirable yield and price levels. In addition, interest earned on certain municipal obligations may be a preference item subject to the federal AMT for non-corporate shareholders. Investment in federally tax-exempt securities poses additional risks. In many cases, the Internal Revenue Service ("IRS") has not ruled on whether the interest received on a particular obligation is tax-exempt, and accordingly, purchases of these obligations are based on the opinion of bond counsel to the issuers at the time of issuance. The Fund and the Adviser rely on these opinions and will not review the basis for them.

Unrated Securities Risks. Unrated securities may be less liquid than comparable rated securities and involve the risk that the Adviser may not accurately evaluate the security's comparative credit rating. To the extent that the Fund purchases or holds unrated securities, the Fund's success in achieving its investment objective may depend more heavily on the Adviser's creditworthiness analysis than if the Fund invested exclusively in rated securities.

Valuation Risk. It may be difficult for the Fund to purchase and sell particular investments within a reasonable time at a fair price, or the price at which it has been valued for purposes of the Fund's NAV, causing the Fund to be less liquid and unable to sell securities for what the Adviser believes is the appropriate price of the investment. Valuation of portfolio investments may be difficult, such as during periods of market turmoil or reduced liquidity and for investments that trade infrequently or irregularly. In these and other circumstances, an investment may be valued using fair value methodologies, which are inherently subjective, reflect good faith judgments based on available information and may not accurately estimate the price at which the Fund could sell the investment at that time. Based on its investment strategies, a significant portion of the Fund's investments can be difficult to value and potentially less liquid and therefore particularly prone to these risks.

Zero Coupon Bond Risk. The Fund may purchase zero coupon bonds, which are debt obligations issued without any requirement for the periodic payment of interest. Zero coupon bonds are issued at a significant discount from their face value. The discount approximates the total amount of interest the bonds would accrue and compound over the period until maturity at a rate of interest reflecting the market rate at the time of issuance. Because interest on zero coupon obligations is not paid to the Fund on a current basis but is, in effect, compounded, the value of the securities of this type is subject to greater fluctuations in response to changing interest rates than the value of debt obligations that distribute income regularly. Zero coupon bonds tend to be subject to greater market risk than interest paying securities of similar maturities. The discount represents income, a portion of which the Fund must accrue and distribute every year even though the Fund receives no payment on the investment in that year. Zero coupon bonds tend to be more volatile than conventional debt securities.

Portfolio Holdings Information

Information about the Fund's daily portfolio holdings is available at www.mairsandpower.com. A complete description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio holdings is available in the Fund's SAI.

Management and Organization of the Fund

Investment Adviser

Mairs & Power, Inc., located at W1520 First National Bank Building, 332 Minnesota Street, Saint Paul, Minnesota 55101-1363, manages the Fund's investments subject to the general supervision of the Board of Trustees. The Adviser is an SEC-registered investment advisory firm. As of December 31, 2020, the Adviser had approximately \$10.6 billion in assets under management.

Pursuant to the investment advisory agreement (the "Advisory Agreement") between the Trust, on behalf of the Fund, and the Adviser, the Adviser is responsible for managing the Fund in accordance with its investment objective and policies and for making decisions with respect to and placing orders for all purchases and sales of portfolio securities. The Adviser also maintains related records for the Fund.

For the services it provides to the Fund, the Fund pays the Adviser a unified management fee, which is calculated daily and paid monthly, at an annual rate of 0.39% of the Fund's average daily net assets.

Under the Advisory Agreement, the Adviser has agreed to pay all expenses of the Fund except interest charges on any borrowings, dividends, and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and

expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unified management fee payable to the Adviser.

A discussion regarding the basis of the Board of Trustees' approval of the Advisory Agreement will be included in the Fund's first annual or semi-annual report to shareholders.

The Fund, as a series of the Trust, does not hold itself out as related to any other series of the Trust for purposes of investment and investor services, nor does it share the same investment adviser with any other series of the Trust.

Portfolio Managers

Brent S. Miller, CFA[®]. Mr. Miller serves as Lead Portfolio Manager for the Fund. Mr. Miller joined Mairs & Power, Inc. in 2019 and has served as Assistant Portfolio Manager since joining the Adviser. Mr. Miller began his career in 2011 as a fixed income analyst at The Travelers Companies in St. Paul, Minnesota from 2011 to 2019. Mr. Miller earned a BS from the University of Minnesota's Carlson School of Management and went on to graduate with an MBA from Northwestern University's Kellogg School of Management. He is a CFA charterholder.

Robert (Bob) W. Thompson, CFA[®], CIC. Mr. Thompson serves as Co-Manager for the Fund. Mr. Thompson joined the Adviser in 2016 and has served as Director of Fixed Income since July 1, 2019. He previously served as Vice President and Fixed Income Portfolio Manager from the fall of 2016 to June 2019. He previously served as Assistant Vice President since joining the Adviser. Mr. Thompson has served as Co-Manager of the Mairs & Power Balanced Fund, a series of Mairs & Power Funds Trust, since April 1, 2018. Prior to joining the Adviser, Mr. Thompson was Vice President, Corporate Bonds at Advantus Capital Management (now Securian Asset Management), in St. Paul Minnesota from 2003 to 2016, and before that he worked for Lutheran Brotherhood (now Thrivent Financial). Mr. Thompson earned a Bachelor of Accountancy from the University of North Dakota and an MBA in Finance from the University of Minnesota, Carlson School of Management. Mr. Thompson is a CFA charterholder, Chartered Investment Counselor and a Certified Public Accountant (inactive).

Additional information about each portfolio manager's compensation, other accounts managed by the portfolio managers and the portfolio managers' ownership of shares in the Fund is available in the Fund's SAI.

CFA[®] is a registered trademark owned by the CFA Institute.

Other Service Providers

Foreside Fund Services, LLC (the "Distributor") is the principal underwriter and distributor of the Fund's shares. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101. Generally, the Distributor will not distribute Shares in aggregations less than a Creation Unit, and the Distributor does not maintain a secondary market in the shares. The Distributor is a broker-dealer registered under the Securities Exchange Act of 1934 and a member of the Financial Industry Regulatory Authority, Inc. ("FINRA"). The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds and is not affiliated with the Adviser or any of their respective affiliates.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, located at 615 East Michigan Street, Milwaukee, Wisconsin 53202, serves as the administrator and transfer agent for the Fund.

U.S. Bank National Association, located at 1555 N. Rivercenter Drive, Milwaukee, Wisconsin 53212, serves as the custodian for the Funds.

Shareholder Information

How to Buy and Sell Shares

The Fund issues and redeems Shares at NAV only in Creation Units. Only APs may acquire Shares directly from the Fund, and only APs may tender their Shares for redemption directly to the Fund, at NAV. Each AP must be (i) a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the NSCC, a clearing agency that is registered with the SEC; or (ii) a DTC participant (as discussed below). In addition, each AP must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Transfer Agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell individual Shares in secondary market transactions through brokers. Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of shares. The spread with respect to shares of the Fund varies over time based on the Fund's trading volume and market liquidity and is generally lower if the Fund has a lot of trading volume and market liquidity and higher if the Fund has little trading volume and market liquidity.

Because of the costs of buying and selling Fund shares, frequent trading may reduce investment return and an investment in the Fund may not be advisable for investors who anticipate regularly making small investments.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

The Fund imposes no restrictions on the frequency of purchases and redemptions of Shares. In determining not to adopt a written policy restricting frequent trading in the Fund, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with the Fund, are an essential part of the ETF process and help keep Share trading

prices in line with NAV. As such, the Fund accommodates frequent purchases and redemptions by APs. However, frequent purchases and redemptions for cash may increase portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, the Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Fund in effecting trades. In addition, the Fund and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

The Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for business. The NAV for the Fund is calculated by dividing the Fund's net assets by its Shares outstanding.

In calculating its NAV, the Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by the Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Board has adopted procedures and methodologies to fair value Fund securities whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) a security has been de-listed or has had its trading halted or suspended; (ii) a security's primary pricing source is unable or unwilling to provide a price; (iii) a security's primary trading market is closed during regular market hours; or (iv) a security's value is materially affected by events occurring after the close of the security's primary trading market. Generally, when fair valuing a security, the Fund will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the security, general and/or specific market conditions and the specific facts giving rise to the need to fair value the security. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Board-adopted valuation procedures. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the security upon the sale of such security.

Dividends, Distributions, and Taxes

Dividends and Distributions

The Fund intends to pay out dividends and interest income, if any, monthly and distribute any net realized capital gains to its shareholders at least annually. The Fund will declare and pay income and capital gain distributions in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Fund. Your investment in the Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

The Fund intends to make distributions that are exempt from federal and Minnesota state income tax, in the form of exempt-interest dividends. However, some of the Fund's distributions other than exempt-interest dividends may be taxed as ordinary income or capital gains (or a combination). The Fund may invest a portion of its assets in securities that generate income that is not exempt from federal income tax or Minnesota state income tax. Income exempt from federal income tax may be subject to state and local income tax. You may also be subject to tax on distributions of any net capital gain made by the Fund. The federal income tax status of all distributions made by the Fund for the preceding year will be reported annually to shareholders.

The Fund intends to qualify each year for treatment as a regulated investment company ("RIC") under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to federal income tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, the Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when the Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

Taxes on Distributions

For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income or qualified dividend income. A portion of dividends received from the Fund (but none of the Fund's capital gain distributions) may qualify for the dividends-received deduction for corporations. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by the Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions of the Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by the Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets). Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by the Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations. The Fund's investment strategies may prevent the Fund's income from being eligible for treatment as qualified dividend income in the hands of non-corporate shareholders or eligible for the dividends-received deduction for corporate shareholders. Since the Fund invests in fixed-income securities, it is not expected that the dividends received from the Fund will be eligible for treatment as qualified dividend income in the hands of non-corporate shareholders or eligible for the dividends-received deduction for corporate shareholders.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from the Fund.

In addition to the federal income tax, certain individuals, trusts and estates may be subject to a Net Investment Income (“NII”) tax of 3.8% on all or a portion of their “net investment income,” which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares) but exempt-interest dividends are not taken into account. This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in the Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by the Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Fund may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act (“FATCA”), the Fund may be required to withhold a generally nonrefundable 30% tax on (i) distributions of investment company taxable income and (ii) distributions of net capital gain and the gross proceeds of a sale or redemption of Fund shares paid to (A) certain “foreign financial institutions” unless such foreign financial institution agrees to verify, monitor, and report to the IRS the identity of certain of its accountholders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution’s country of residence), and (B) certain “non-financial foreign entities” unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. In December 2018, the IRS and Treasury Department released proposed Treasury Regulations that would eliminate FATCA withholding on Fund distributions of net capital gain and the gross proceeds from a sale or redemption of Fund shares. Although taxpayers are entitled to rely on these proposed Treasury Regulations until final Treasury Regulations are issued, these proposed Treasury Regulations have not been finalized, may not be finalized in their proposed form, and are potentially subject to change. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in the Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

The Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares and disallowed to the extent of the amount of exempt-interest dividends received by the shareholder with respect to such Shares. The ability to deduct capital losses may be limited.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less.

The Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to realize investment income and/or capital gains or losses that it might not have realized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

Tax Considerations

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Tax Matters" in the SAI.

Distribution Plan

The Board has adopted a Distribution and Service Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of Fund assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

Premium/Discount Information

The Fund is new and therefore does not have any information regarding how often Shares are traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund.

Additional Notices

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Fund make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly.
